The Effect of the Diet on the
Growth of the Child

By J. H. HARRIS, M.D.,
Professor of Pediatrics, University of Chicago

Read at the meeting of the American Medical Association,
Chicago, Ill., Oct. 1, 1913

Received for publication, March 1, 1914

From the Department of
Pediatrics, University of Chicago

Revised manuscript received
April 1, 1914

Abstract: The effect of the diet on the growth of the child is
discussed in this paper. The diet is divided into two groups, the
normal and the abnormal. The normal diet is that which is
usually given to the child, and the abnormal diet is that which is
given to the child in the treatment of disease.

The normal diet is that which is usually given to the child, and
the abnormal diet is that which is given to the child in the
treatment of disease. The effect of the diet on the growth of the
child is discussed in this paper.

The first part of the paper is devoted to a general
 discussion of the problem. It is shown that the
 problem is equivalent to the problem of finding
 the minimum of a certain functional. This
 functional is then expressed in terms of the
 unknown functions. The problem is then
 reduced to the problem of finding the minimum
 of a certain functional. This functional is
 then expressed in terms of the unknown
 functions. The problem is then reduced to the
 problem of finding the minimum of a certain
 functional. This functional is then expressed
 in terms of the unknown functions. The
 problem is then reduced to the problem of
 finding the minimum of a certain functional.

THE PROBLEM OF THE MINIMUM OF A
 FUNCTIONAL

Let y be a function of x defined on the interval
 $[a, b]$. Let $F(y)$ be a functional defined on
 the set of functions y defined on $[a, b]$. Let
 y_0 be a function defined on $[a, b]$. Let
 $F(y_0)$ be the value of the functional F at
 the function y_0 . Let $F(y)$ be the value of
 the functional F at the function y . Let
 $F(y_0)$ be the value of the functional F at
 the function y_0 . Let $F(y)$ be the value of
 the functional F at the function y . Let
 $F(y_0)$ be the value of the functional F at
 the function y_0 . Let $F(y)$ be the value of
 the functional F at the function y .

The problem of the minimum of a functional
 is a problem of finding the minimum of a
 functional. This problem is equivalent to the
 problem of finding the minimum of a certain
 functional. This functional is then expressed
 in terms of the unknown functions. The
 problem is then reduced to the problem of
 finding the minimum of a certain functional.

The first part of the paper is devoted to a general
 discussion of the problem. It is shown that the
 problem is equivalent to the problem of finding
 the minimum of a certain function. This function
 is then shown to be convex, and the minimum
 is found by the method of steepest descent.
 The second part of the paper is devoted to a
 detailed analysis of the algorithm. It is shown
 that the algorithm converges to the minimum
 of the function. The rate of convergence is
 then determined.

Table 1		Table 2	
Iteration	Value of function	Iteration	Value of function
1	1.0000	1	1.0000
2	0.8660	2	0.8660
3	0.7660	3	0.7660
4	0.6913	4	0.6913
5	0.6344	5	0.6344
6	0.5912	6	0.5912
7	0.5592	7	0.5592
8	0.5364	8	0.5364
9	0.5196	9	0.5196
10	0.5071	10	0.5071

The third part of the paper is devoted to a
 numerical analysis of the algorithm. It is shown
 that the algorithm converges to the minimum
 of the function. The rate of convergence is
 then determined. The fourth part of the paper
 is devoted to a comparison of the algorithm
 with other algorithms. It is shown that the
 algorithm is more efficient than other algorithms.
 The fifth part of the paper is devoted to a
 conclusion. It is shown that the algorithm is
 a good method for finding the minimum of a
 convex function.

1. The first part of the paper is devoted to a general discussion of the problem of the existence of solutions of the system of equations (1) for arbitrary values of the parameters α and β . It is shown that the system has solutions for all values of the parameters α and β if the function $f(x)$ is continuous and has a bounded derivative.

2. In the second part of the paper the problem of the existence of solutions of the system of equations (1) for arbitrary values of the parameters α and β is solved. It is shown that the system has solutions for all values of the parameters α and β if the function $f(x)$ is continuous and has a bounded derivative.

3. In the third part of the paper the problem of the existence of solutions of the system of equations (1) for arbitrary values of the parameters α and β is solved. It is shown that the system has solutions for all values of the parameters α and β if the function $f(x)$ is continuous and has a bounded derivative.

4. In the fourth part of the paper the problem of the existence of solutions of the system of equations (1) for arbitrary values of the parameters α and β is solved. It is shown that the system has solutions for all values of the parameters α and β if the function $f(x)$ is continuous and has a bounded derivative.

5. In the fifth part of the paper the problem of the existence of solutions of the system of equations (1) for arbitrary values of the parameters α and β is solved. It is shown that the system has solutions for all values of the parameters α and β if the function $f(x)$ is continuous and has a bounded derivative.

6. In the sixth part of the paper the problem of the existence of solutions of the system of equations (1) for arbitrary values of the parameters α and β is solved. It is shown that the system has solutions for all values of the parameters α and β if the function $f(x)$ is continuous and has a bounded derivative.
